

Gyro Logic: A Geometric Perspective on Context-Dependent Reasoning

Abstract

Gyro Logic proposes a geometric formulation of logic where truth is modeled as a position in a manifold. Conflict is represented as curvature, and inference as geodesic trajectories.

Core Idea

Truth is not a binary value but a structured state dependent on observer, goal, and history.

Formalization

$T \in M$ (manifold), Conflict ~ curvature, Inference ~ geodesic.

Implication

Provides a unified framework for context-aware reasoning and next-generation AI systems.
